Foundations of LLM Mastery: Prompt Engineering Essentials

In this half-day course, participants were introduced to the fundamentals of prompt engineering, equipping them with practical strategies and hands-on experience to maximize LLM's output accuracy, relevance and utility.

From core principles to advanced techniques, this course covered the subject comprehensively, including topics such as role prompting, meta prompting, mitigating hallucinations, task decomposition, and prompt chaining. Participants also got to know how to work with LangChain, an indispensable framework for building applications based on LLMs.

During the course participants developed a foundational understanding of prompt engineering techniques, enabling them to develop products based on language models effectively for a wide range of tasks.

Topics covered:

- LLMs in a Nutshell
- Prompt Templates
- Hugging Face Ecosystem
- Data Loading & Text Splitting
- The Five Principles of Prompting
- Task Decomposition
- Standard Practices
- Prompt Chaining
- Introduction to LangChain

Course content level:

- Basic

Course format:

- Online lectures, demos, and hands-on labs of **2.5 hours** (breaks excluded)
- Equivalent to **0.125 ECTS** credits

Lectures taught by:

- Simeon Harrison (AI Factory Austria AI:AT)

Hands-on labs:

- Conducted on the Booster partition (A100 GPUs) of LEONARDO

Organized by:

- AI Factory Austria AI:AT
